

## **The Story of Radiopaedia**

Radiopaedia is the largest collaborative online radiology resource on the planet. It started from humble beginnings in 2007, the idea of one lone radiology registrar in Melbourne. He (Frank) was soon joined by me (Jeremy) as we started to upload cases and write articles about topics in radiology.

Radiopaedia was always built to be a free resource with contributor-uploaded cases and wiki-style community-written articles. It has grown to become more than we could have imagined.

We now have over 35,000 cases and 13,000 articles on topics as common as pneumonia to as rare as uterine torsion. Just 2 weeks after the outbreak of the 2019 novel Coronavirus, there were articles on Radiopaedia and accompanying cases.

The community of radiologists and radiographers who build Radiopaedia change the lives of thousands directly and hundreds of thousands around the world as they are given correct diagnoses from people who may not have had access to up to date content were it not for Radiopaedia.

Our mission: to create the best radiology reference the world has ever seen: for free, for ever, for all!

Come and hear about the past, present and future of Radiopaedia and how it can change your world too.
